

ADSY Technologies

Frequently Asked Questions

General Questions

Q: What does ADSY Technologies do?

A: ADSY Technologies is an IT services company offering web development, mobile app development, AI/ML solutions, AI automation, cloud services, UI/UX design, and cybersecurity services to businesses of all sizes.

Q: Where is ADSY Technologies located?

A: Our head office is in Raipur, Chhattisgarh, India. We work with clients across India and internationally through remote collaboration.

Q: Does ADSY Technologies work with startups or only large companies?

A: We work with businesses of all sizes - from early-stage startups to established enterprises. Our service plans are flexible enough to accommodate different budgets and project scales.

Q: How do I get started with a project?

A: Reach out via email at sales@adsytechnology.com or call +91 771 400 2200. We'll schedule a discovery call to understand your requirements and provide a proposal with timeline and pricing.

Q: Do you sign NDAs before discussing project details?

A: Yes, we're happy to sign a Non-Disclosure Agreement (NDA) before any detailed discussion if your project requires confidentiality.

Technical Questions

Q: What technologies do you work with?

A: We work with a wide range of modern technologies including React, Next.js, Vue, Node.js, Python (Django/FastAPI), Flutter, React Native, Swift, Kotlin, AWS, Google Cloud, Azure, and AI/ML frameworks such as TensorFlow, PyTorch, and LangChain.

Q: Can you work with our existing codebase instead of building from scratch?

A: Yes, we regularly take over and extend existing projects. We start with a code and architecture review to understand the current system before proposing next steps.

Q: Do you provide source code ownership after project completion?

A: Yes, once the project is paid in full, complete source code ownership and intellectual property rights are transferred to the client, unless otherwise agreed in the contract.

Q: What is your development process?

A: We follow an agile approach with defined sprints, regular progress updates, and milestone-based reviews. Clients get visibility into progress through shared project boards and scheduled check-ins.

Q: Do you provide testing and quality assurance?

A: Yes, all projects go through functional testing, cross-browser/device testing (for web and mobile), and a review cycle before final delivery.

Billing & Payment Questions

Q: What payment methods do you accept?

A: We accept bank transfers (NEFT/RTGS/IMPS), UPI, and international payments via wire transfer for overseas clients. Invoices are shared via email with clear payment instructions.

Q: Do you require an advance payment?

A: Yes, most fixed-scope projects require a 40% advance before work begins, with the remaining balance split across a midpoint milestone and final delivery. See our Pricing document for full payment terms.

Q: Are your prices negotiable?

A: Pricing is based on project scope and complexity. While our rate ranges reflect standard market pricing, we're happy to discuss scope adjustments to fit different budgets during the proposal stage.

Q: Do you offer refunds if I'm not satisfied with the work?

A: Yes, we have a defined refund policy for eligible circumstances. Please refer to our Refund Policy document for full details on eligibility and the refund process.

Q: Is GST included in the quoted prices?

A: No, all prices quoted are exclusive of applicable GST (18%) unless explicitly stated otherwise in your proposal or invoice.

Service & Project Questions

Q: How long does a typical project take?

A: Timeline varies by project type and complexity. A basic website may take 2-4 weeks, while a custom web application or mobile app can take 8-16 weeks. Exact timelines are confirmed during the proposal stage based on your specific requirements.

Q: Do you provide post-launch support?

A: Yes, we offer monthly maintenance plans (Basic, Standard, Premium) for ongoing support after your project goes live. See our Pricing document for plan details.

Q: Can I request changes during the project?

A: Minor changes within the agreed scope are accommodated during development. Significant scope changes are handled through a change request process, which may affect timeline and cost - this is discussed transparently before any additional work begins.

Q: Do you offer AI chatbot solutions like this one?

A: Yes, RAG-based AI chatbots trained on your own business data (similar to this assistant) are one of our core automation offerings. Contact our sales team to discuss a custom chatbot for your business.

Q: What happens if I need to pause or cancel my project?

A: You can pause or cancel a project by notifying your project manager in writing. Charges apply only for work completed up to that point, in line with the payment milestones already reached.
