

ADSY Technologies

Project Process, Timeline & Delivery

Project Process

Every project at ADSY Technologies follows a structured process designed to keep work transparent, predictable, and aligned with client goals from start to finish.

Stage	What Happens
1. Discovery Call	Initial conversation to understand your business goals, requirements, and constraints. Usually 30-60 minutes.
2. Proposal & Scope	We prepare a written proposal covering scope, deliverables, timeline, and pricing. Both parties review and agree before proceeding.
3. Kickoff & Planning	Formal project kickoff, advance payment collected, and a detailed sprint plan or milestone schedule is shared.
4. Design & Development	Our team designs and builds the solution in iterative cycles, with regular progress updates shared with the client.
5. Review & Feedback	Client reviews work at each milestone. Feedback is incorporated within the agreed scope before moving forward.
6. Testing & QA	Functional, performance, and cross-platform testing is carried out before final delivery.
7. Deployment & Handover	The completed solution is deployed to production, and all documentation, credentials, and source files are handed over.
8. Post-Launch Support	A 30-day bug-fix warranty applies automatically. Ongoing maintenance plans are available separately.

Typical Project Timelines

Timelines vary based on project complexity and scope. The table below gives general estimates for common project types.

Project Type	Estimated Timeline
Starter Website (up to 5 pages)	2 - 4 weeks
Business Website with CMS	4 - 6 weeks
E-commerce Website	6 - 10 weeks
Custom Web Application	8 - 16 weeks

Project Type	Estimated Timeline
Mobile App (single platform)	8 - 14 weeks
Mobile App (cross-platform)	10 - 18 weeks
AI Chatbot / Automation Solution	3 - 8 weeks
Cloud Migration Project	2 - 6 weeks

These ranges are general estimates for planning purposes. Exact timelines are confirmed in your project proposal after the discovery phase, based on your specific requirements and any third-party dependencies.

Project Delivery

Once a project is complete, ADSY Technologies follows a defined handover process to ensure clients receive everything needed to own and operate their solution independently.

What's Included at Final Delivery

- Full source code, transferred to the client upon final payment.
- Deployment to the agreed production environment (or deployment guide if self-hosted by the client).
- Login credentials and access details for all relevant systems (hosting, domain, third-party services set up during the project).
- Basic documentation covering system architecture, key features, and how to perform common tasks.
- A recorded or live walkthrough session to demonstrate the delivered solution.

Delivery Acceptance

Clients are given a review period (typically 5-7 business days) after final delivery to confirm the solution meets the agreed scope. Any issues identified within this window and within the original scope are addressed at no additional cost. The 30-day post-launch bug-fix warranty begins from the date of final delivery acceptance.

Ongoing Relationship

Many clients continue working with ADSY Technologies beyond initial delivery through maintenance plans, feature expansions, or new projects. We aim to be a long-term technology partner rather than a one-time vendor.
