

ADSY Technologies

Our Services

ADSY Technologies offers a full range of technology services designed to help businesses build, scale, and modernize their digital operations. Below is a detailed overview of each service line we offer.

1. Web Development

We design and build fast, responsive, and secure websites and web applications tailored to your business needs — from simple marketing websites to complex, database-driven platforms.

- Custom business websites and landing pages
- E-commerce platforms with payment gateway integration
- Web application development (React, Vue, Next.js, Node.js, Django, FastAPI)
- Progressive Web Apps (PWAs) for offline-capable, app-like experiences
- Website redesign and performance optimization
- CMS-based websites (WordPress, headless CMS solutions)

2. Mobile App Development

We build native and cross-platform mobile applications for iOS and Android that deliver smooth, reliable user experiences.

- Cross-platform apps using Flutter and React Native
- Native iOS development (Swift) and native Android development (Kotlin)
- App UI/UX design and prototyping
- Backend API development and third-party integrations
- App Store and Google Play deployment support
- Post-launch maintenance and version updates

3. AI & Machine Learning Services

We help businesses adopt practical, results-driven AI solutions, from predictive models to fully custom machine learning pipelines.

- Custom AI model development and training
- Natural Language Processing (NLP) solutions — chatbots, sentiment analysis, document processing
- Computer vision applications (image recognition, quality inspection, OCR)
- Predictive analytics and recommendation systems
- AI model integration into existing business systems
- Data preprocessing, labeling, and pipeline setup

4. AI Automation

We design intelligent automation workflows that eliminate repetitive manual work and connect your tools and systems together using AI-powered logic.

- Workflow automation using n8n, Zapier, and Make (Integromat)
- AI-powered customer support chatbots (RAG-based, trained on your own data)
- Automated document processing and data extraction
- Email and lead-response automation
- Internal business process automation (reporting, approvals, notifications)
- Integration between CRMs, spreadsheets, messaging platforms, and AI models

5. Cloud Services

We help businesses migrate to, manage, and optimize their cloud infrastructure for reliability, security, and cost-efficiency.

- Cloud migration (AWS, Google Cloud, Microsoft Azure)
- Cloud infrastructure setup and architecture design
- Serverless application deployment
- Database hosting and management (PostgreSQL, MongoDB, Supabase, Firebase)
- CI/CD pipeline setup for automated deployments
- Cloud cost optimization and monitoring

6. UI/UX Design

We create intuitive, visually polished interfaces backed by real user research and design principles, not just templates.

- User research and journey mapping
- Wireframing and interactive prototyping (Figma)
- Complete UI design systems and style guides
- Mobile app and website interface design
- Usability testing and iterative design improvements
- Design handoff and developer collaboration support

7. Cybersecurity

We help businesses identify vulnerabilities and strengthen their security posture across applications, infrastructure, and internal processes.

- Web and mobile application security audits
- Vulnerability assessment and penetration testing (VAPT)
- Secure code review
- Cloud security configuration review

- Security awareness guidance for internal teams
- Incident response planning and support
