Adsy Services

Knowledge Base • Effective Date: August 13, 2026

Web Development

Responsive websites, business portals, dashboards, e-commerce platforms, customer portals, and API-connected web applications.

Mobile App Development

Android and iOS applications with authentication, API integration, push notifications, payment integration, cloud backend integration, and deployment support.

AI/ML Services

Data preparation, model selection, training, evaluation, inference integration, prediction, classification, recommendation, text processing, and intelligent applications.

AI Automation

Customer-support automation, document processing, lead qualification, email and notification workflows, data extraction, and business process automation.

Cloud Services

Cloud deployment, databases, storage, monitoring, backup planning, scaling, and infrastructure configuration.

UI/UX Design

User flows, wireframes, high-fidelity screens, design systems, responsive layouts, usability improvements, and user-centered interface design.

Cybersecurity

Security assessment, authentication review, access-control review, secure configuration, vulnerability identification, and security recommendations.

Common Service Process

Discovery → requirements → architecture/design → implementation → testing → deployment → support.

Customer Inputs

Project goals, target users, required features, existing systems, technical constraints, preferred timeline, and budget range.

Scope

Final technology stack, timeline, deliverables, and service scope are confirmed after requirements analysis.
